Agenda

1. Sketching explorations
2. Selected interface & rationale
3. Low-fi Paper Prototype Task Flows
4. Testing
5. Discussion

Our value

Make creativity **feel like an adventure** through **low-pressure** art-making that helps people rediscover inspiration during **creative burnout**

PROB -> SOLU

Creatives experiencing burnout due to **external/ imposed pressure** to **perform and produce**

Turn creativity into a low-pressure adventure that helps people rediscover inspiration through playful art-making

PROB -> SOLU

Creatives experiencing burnout due to external/ imposed pressure to perform and produce

Turn creativity into a **low-pressure adventure** that helps people **rediscover inspiration** through **playful art-making**

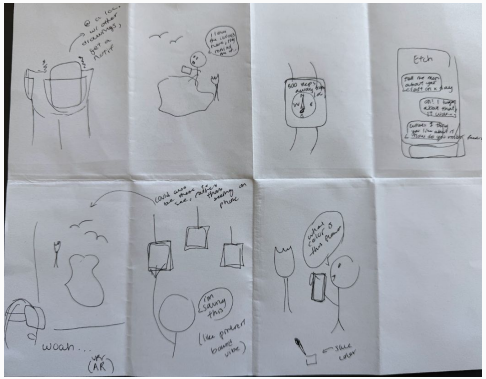

Primary User / Problem / Solution

Creative people whose craft has become tied to work or expectations often **struggle to make room** for experimentation and play. We make **outdoor creative breaks** easy: seeing others' art nearby encourages **users to pause**, create without pressure, and revisit their discoveries for inspiration in their main craft

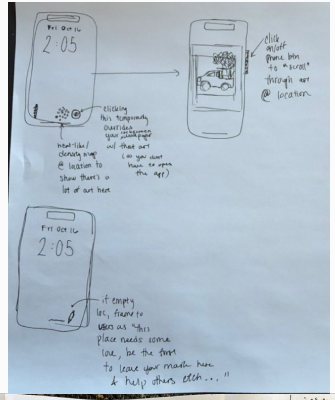

IDEATION

Phone (App/Widget/Lockscreen)

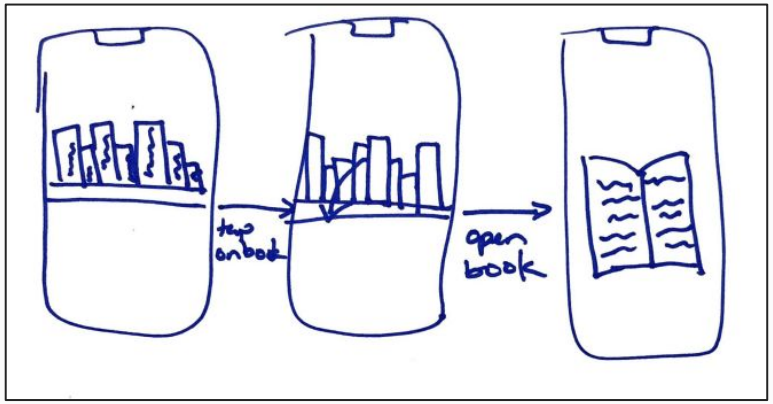

DISTINCT REALIZATION 3

Phone (App/Widget/Lockscreen)

TOP REALIZATION 1

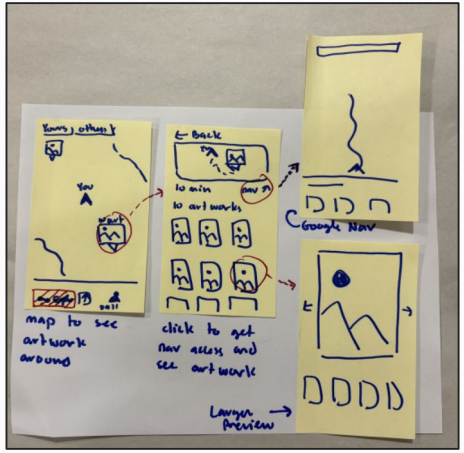

Smart Watch

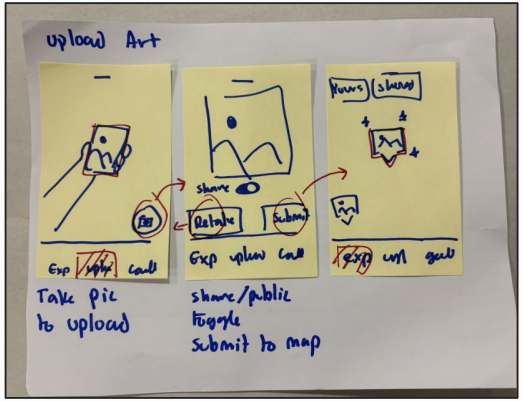

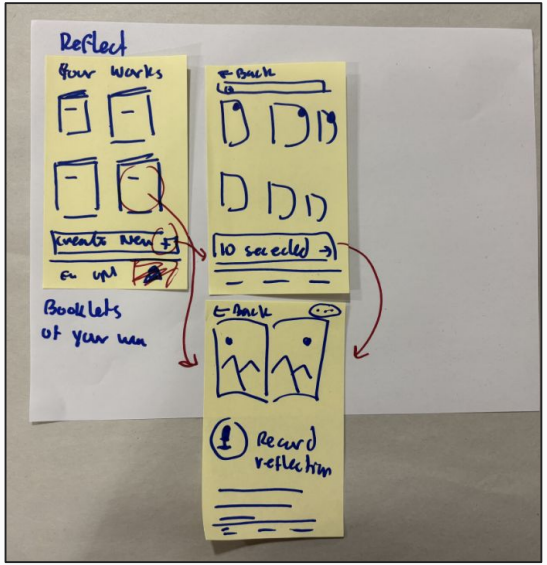

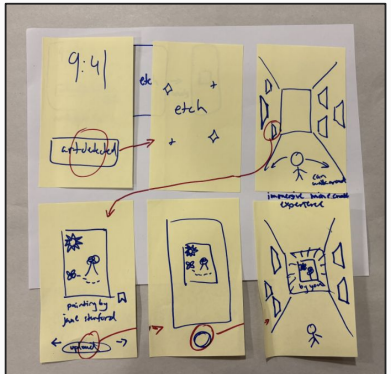

TOP REALIZATION 2

Phone

SMART WATCH VS. PHONE

What etch needs	Smart Watch	Phone
Easy to start	Separate from the supplies	**The case holds the supplies**
Eyes on surroundings	**Haptic turns, no screen**	A map pulls attention
Capture your piece	No camera	**Built-in camera**
Revisit past work	Too small to browse	**Gallery and reflections**
Process over result	**Stays out of the way while you make**	Camera pulls focus to the final photo

WHY PHONE?

The phone has the hardware etch needs. The watch's strengths were design choices we could keep.

WHAT SHAPED OUR DECISION

Supplies close at hand: Having paints nearby lowered the barrier to start. Our supplies live on the phone case, so the interface should live on the phone too.

Revisiting old work: Seeing her old paintings helped Lola reconnect with making. Looking back at past pieces needs screen space.

Meaning is in the process: Needfinding showed the meaning of craft is in the process of making. The watch had the edge here, since it has no camera pulling focus toward a finished photo. We carried that over by keeping saving private and putting reflection after each session.

Staying aware outdoors We flagged the risk of people walking around glued to a screen, so discovery starts from a notification instead of a map you have to watch.

Platform constraints: A watch has no camera and a small screen. A phone has a camera, GPS, and room for a gallery, and most people already own one.

LOW-FI PROTOTYPE

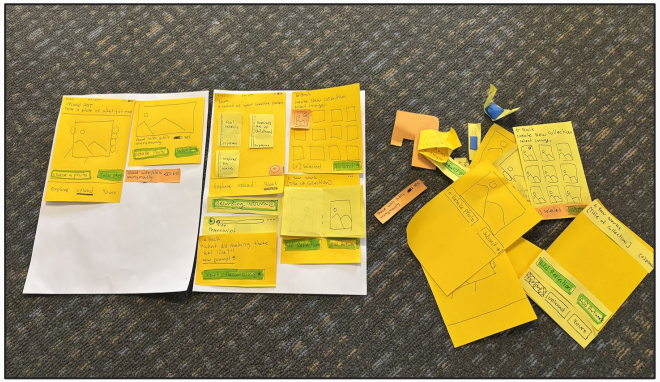

PAPER PROTOTYPE V1

BUILDING

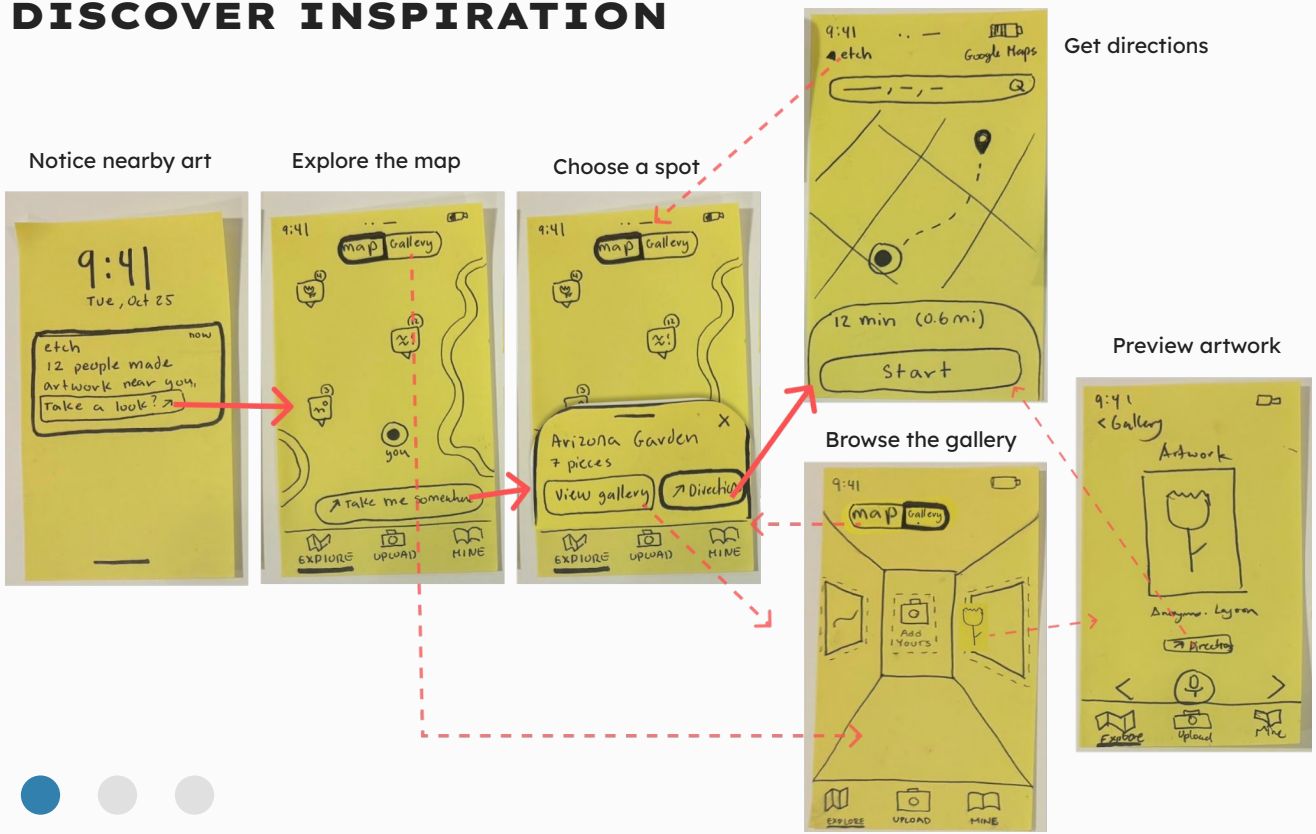

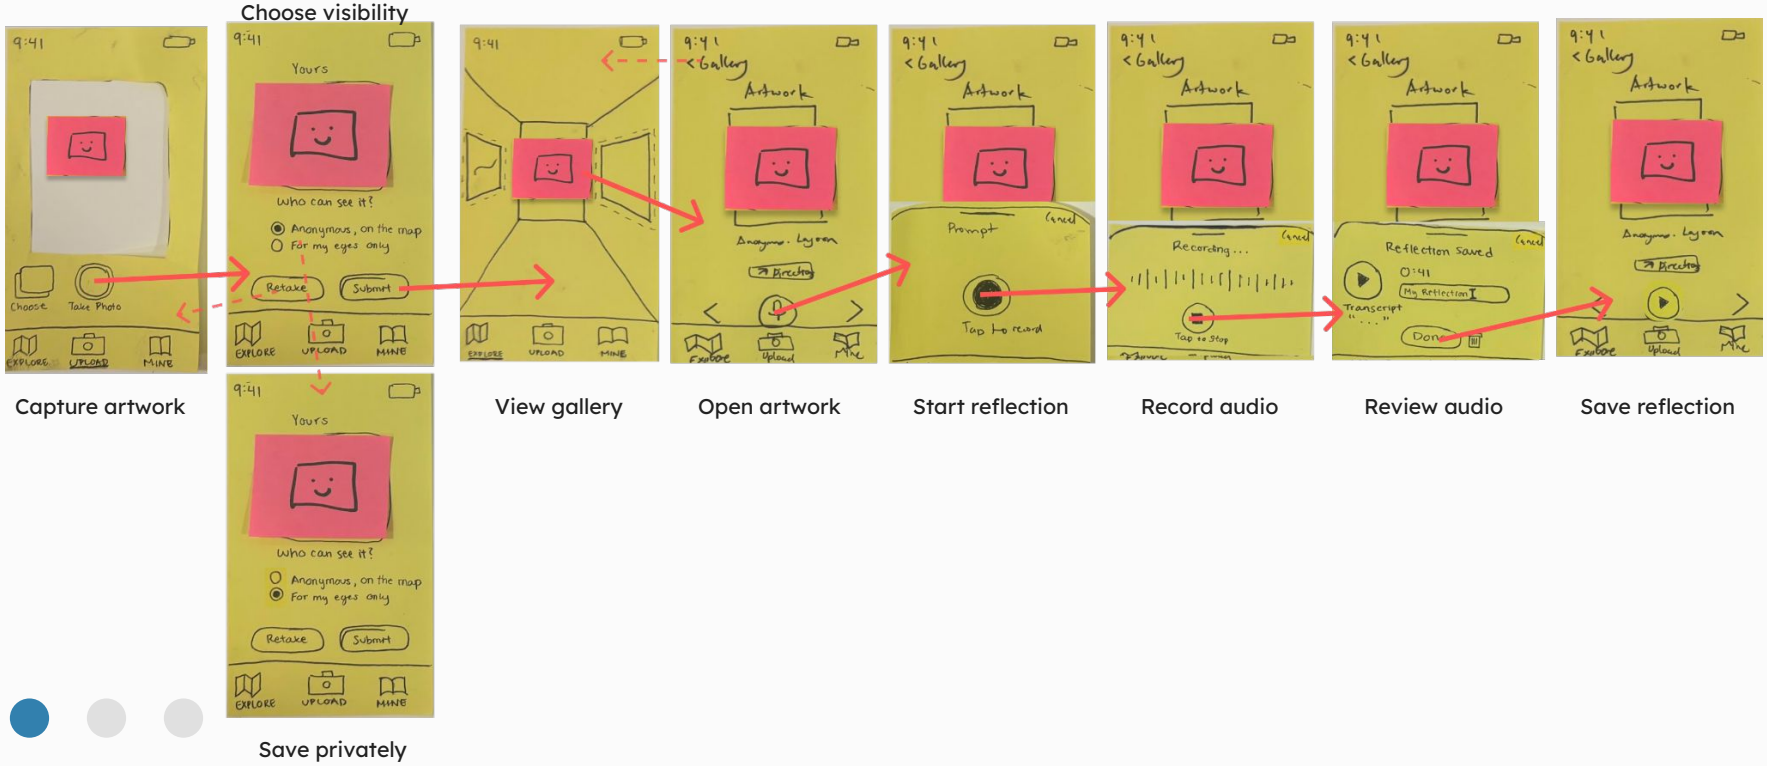

TASK 1

DISCOVER INSPIRATION

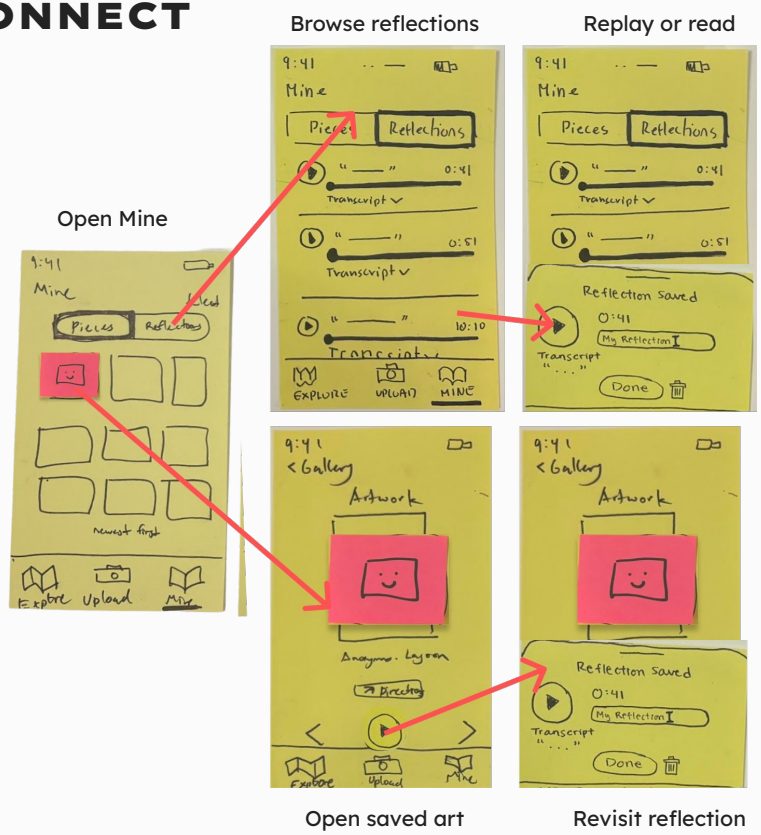

TASK 2

CREATE AND SAVE/SHARE

TASK 3

REVISIT AND CONNECT

TESTING METHODOLOGY

HOW WE TESTED

We ran four in-person usability tests with our paper prototype. Each participant tried three tasks while thinking aloud, then rated each task for satisfaction and flexibility.

RECRUITMENT

Where: The Stanford d.school hosts a variety of craft and creative events that are open to the community. These events draw out different creative archetypes, from dedicated crafters to people who come because the event makes it easy to start. We attended one of these events and respectfully recruited after the programming ended.

Who: Creatives who either (a) placed the importance of creating in the process, (b) are struggling to make time for creating, or (c) both.

After recruiting: We saved each participant's contact information and met them later at a location that worked for them.

Compensation: Our verbal appreciation.

PARTICIPANTS

Booker
Software Developer
Writer (P1)

Jonas
Palo Alto Resident
Violinist (P2)

Cyrus
Palo Alto Resident
Journaler (P3)

James
Product Manager
Ideator (P4)

We sought creatives who either (a) placed the importance of creating in the process, (b) are struggling to make time for creating, or (c) both.

WHY THESE PARTICIPANTS

Booker (a, b): Writes in short sessions around a full-time job and struggles to find time for it.

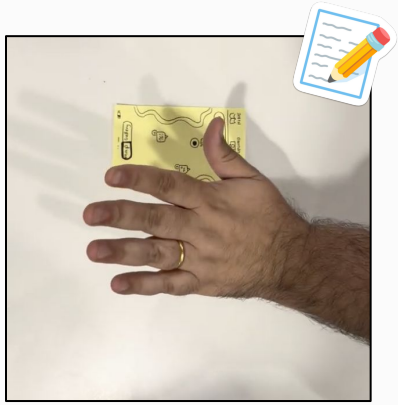

Jonas (a): Plays violin for fun and learns new pieces by ear.

Cyrus (a): Journals for himself and goes on walks to get unstuck.

James (b): Sketches ideas at work but doesn't call himself an artist, and rarely makes things just for fun despite his desire to.

Different crafts: We recruited across writing, music, journaling, and sketching to see if etch meets the needs of diverse crafters.

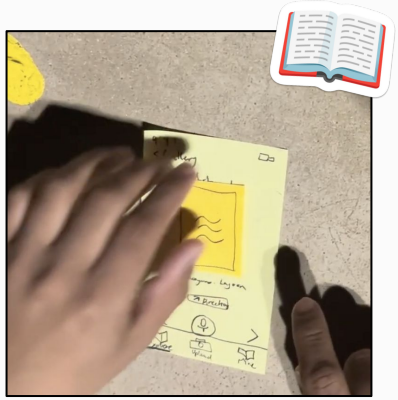

ENVIRONMENT

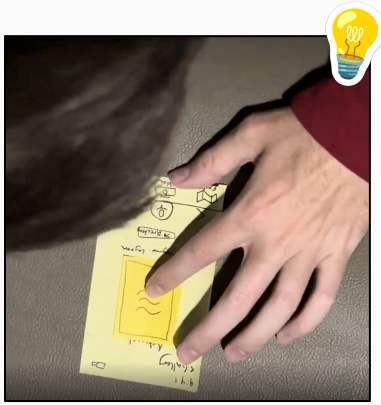

Indoor table
Test 1

Outdoor patio
Test 2

Outdoor pavement
Test 3

Lounge bench
Test 4

We met each participant at a location that worked for them. Two tests were indoors and two were outside.

APPARATUS

Paper prototype: We built our screens out of sticky notes on paper the size of an average phone, to best simulate using etch on a real phone. Pink and yellow overlays stood in for pop-ups and artwork.

Human computer: Manually simulated etch's responses, swapping screens after each tap.

Recording: Held the phone above the table and recorded the participant's hands and the screens.

Consent form: Each participant signed one before we started recording.

PROCEDURE

Consent: The participant signs the consent form

Context: We explain that etch helps creatives who are experiencing burnout find inspiration

Demo: We show how to use the paper prototype and how to think aloud, without showing any of the tasks

Tasks: We give one task at a time, from simple to complex. After each task, the participant gives both ratings and explains them

Wrap-up: We ask what was most frustrating and most enjoyable, then answer any questions

PROCEDURE - Team Member Roles

Elsa (Test 1), Jia (Tests 2-4)

Facilitator

Read the script, gave one task at a time, and conducted the post-test verbal collection of metrics, feedback, and follow-ups.

Kelly

Computer

Swapped the paper screens in response to each tap.

Jia (Test 1), Elsa (Tests 2-4)

Recorder

Held the phone above the table and recorded the participant's hands and the screens

Ahyan

Notetaker

Recorded critical incidents and quotes with timestamps.

THE THREE TASKS

SIMPLE

Discover inspiration

“Imagine you're taking a short break and want to find inspiration outside. Use the app to find a place to create.”

MODERATE

Create and save

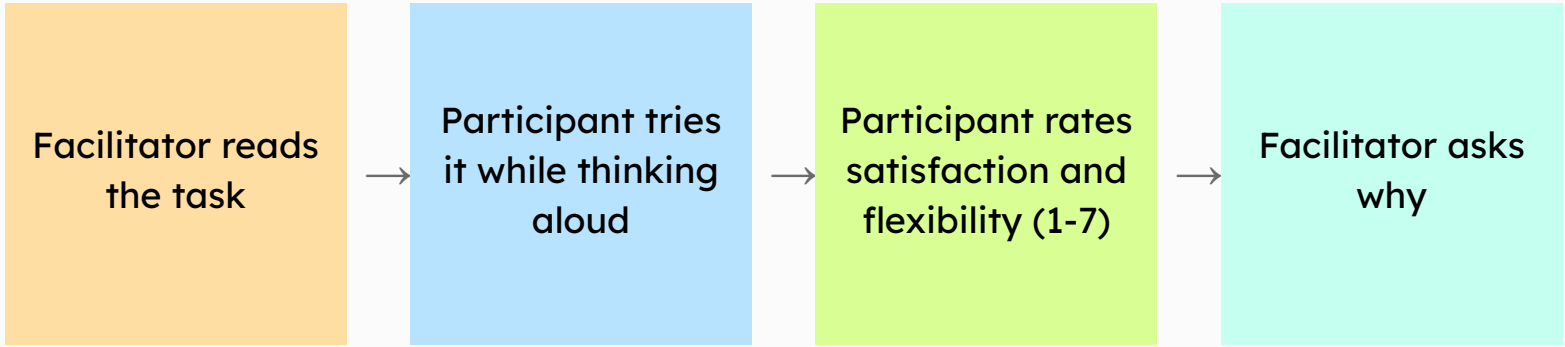

“You've arrived at that spot and made a piece of art. Use the app to save it.”

COMPLEX

Revisit and connect

“You've made several pieces with etch. Use them to reflect on or find inspiration for your own craft.”

EACH TASK

The note-taker records positive and negative critical incidents throughout each task

KEY MEASUREMENTS

USABILITY GOAL

Pleasing

High user satisfaction

Our users are burnt out, so using etch should feel like a break

Key Measurement

Satisfaction rating (1-7)

USABILITY GOAL

Flexible

Multiple ways to complete tasks

Needfinding showed creatives need both structure to start and freedom to explore

Key Measurement

Flexibility rating (1-7) and unassisted completion

KEY MEASUREMENT

USABILITY GOAL 1

Pleasing

high user satisfaction

Why Pleasing

Etch aims to make creativity feel delightful again, helping people move from burnout toward curiosity and inspiration. A pleasing experience is central to that goal → should leave people feeling refreshed and excited to create.

Process data: Positive and negative critical incidents (mistakes, quotes, emotions), each given a 0-4 severity rating.

Bottom-line data: “How satisfied were you with this experience?” from 1 (very dissatisfied) to 7 (very satisfied), after each task.

Why this measure: Adapted from the After-Scenario Questionnaire (Lewis, 1991), a standard post-task satisfaction scale that also runs 1 to 7.

Initial target: An average of 5 or higher on each task (4 is neutral).

KEY MEASUREMENT

USABILITY GOAL 2

Flexible

multiple ways to complete tasks

Why Flexible

Interviews showed creativity follows different paths. Etch must support different workflows so people can follow their own creative process

Process data: Which path each participant chose (e.g. notification or map), and any time they looked for an option that wasn't there (e.g. misclicks or expressions to do something in a different way than the app supported).

Bottom-line data: “How well did etch let you complete this task in the way you preferred?” from 1 (not at all) to 7 (completely), plus unassisted completion rate for each path.

Why this measure: The rating is our own question, so we pair it with completion rate as a behavioral check.

Initial target: An average of 5 or higher on each task, and 80% unassisted completion for each path.

TESTING RESULTS

BOTTOM-LINE DATA

Task	Satisfaction / 7	Flexibility / 7	Misclicks	Time
1) Discover	4.6	4.6	0.5	3:31
2) Save/share	4.9	4.0	1.0	1:51
3) Connect	5.3	4.1	0.25	4:07

TASK 1
DISCOVER INSPIRATION

“I’d like to envision myself … in this area not just see what someone drew in an area”
— James

Findings

Familiar map UI brought expectations for previews (i.e. surroundings, live activity)

Others artwork alone is not enough to make a place worth visiting

TASK 1
DISCOVER INSPIRATION

"I would have liked to have seen a list and … compared multiple things … instead of getting one."
— James

Findings

Wanted to see multiple artworks at once versus one by one

TASK 1
DISCOVER INSPIRATION

“I try to make them all go away as much as possible [notifications]”
— Booker

Findings

Notifications were easy to dismiss

App must earn attention before asking people to go

TASK 2
CREATE AND SHARE

“Why do I want to share it?”
— Booker

Findings

Participants understood uploading, but questioned the benefit of sharing personal artwork

Private creation needs its own clear value. Sharing should feel like a choice

TASK 2
CREATE AND SHARE

“Only I can view it, which is a nice option to have”
— Cyrus

Findings

Booker and Jonas chose “For my eyes only.” Anonymity did not replace desire to keep for oneself

TASK 2
CREATE AND SHARE

"If I was looking for inspiration, I'd want to keep it to myself a little bit, so I can think about what I've done"
— Jonas

Findings

"Submit" made saving feel like sending work to someone else

Users wanted to keep their artwork private so they could think about it before optionally sharing.

TASK 3
CONNECT TO A CRAFT

"What am I doing?"
– Booker

Findings

Found it hard to complete task - unclear how result would connect back to main craft

Had to re-ask for task goal

TASK 3
CONNECT TO A CRAFT

"Then I'd realize my art probably doesn't inspire me that much"
— James

Findings

Looking back at past artwork did not always help users find inspiration for their main craft or current projects

TASK 3
CONNECT TO A CRAFT

"I appreciate that there's a transcript and an audio … I can just read it"
— Jonas

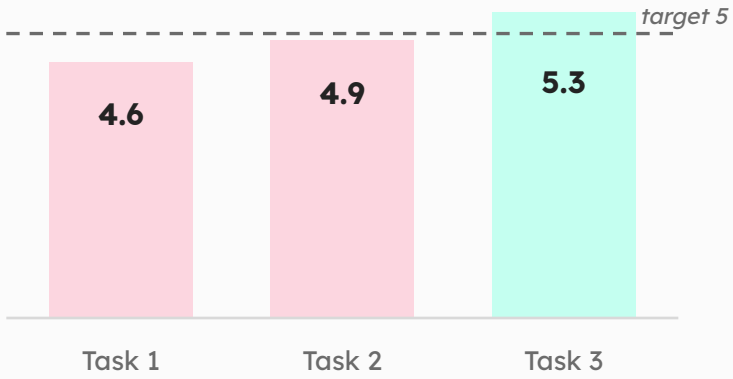

Findings

Two participants mentioned liking the transcript option for voice recordings.

DID WE MEET OUR GOALS?

Pleasing

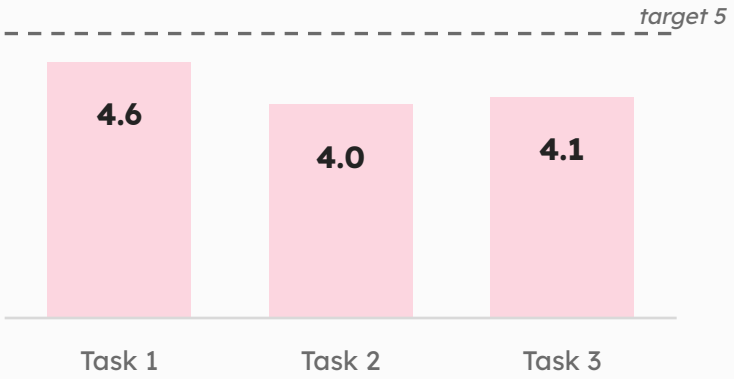

Partly met

Average satisfaction out of 7, after each task

Flexible

Partly met

Average preferred-way rating out of 7
Unassisted completion: 100%, 100%, 25%

SAID VS RATED: (they sometimes contradict)

Scores ran higher than what people said while giving them

6
out of 7

TASK 1, Cyrus (P3)

“I didn't quite understand the change from the waves to the mountain”

Missed that swiping showed a new artwork

7
out of 7

TASK 2, James (P4)

“Uploading our work, that's like a seven”

Then: “I'd like to save my art myself, to my camera”

5
out of 7

TASK 3, Booker (P1)

“Often the end result does not actually matter much to me”

Task 3 asked them to look back at finished pieces

Testing one design inflates ratings (Tohidi et al., CHI 2006)

DID WE MEET OUR GOALS? (Long)

Pleasing, satisfaction (target 5+): Task 1 averaged 4.6, Task 2 4.9, and Task 3 5.3. Only Task 3 reached the target.

Flexible, preferred-way rating (target 5+): Task 1 averaged 4.6, Task 2 4.0, and Task 3 4.1. No task reached the target.

Flexible, unassisted completion (target 80%): All four finished Tasks 1 and 2 on their own. In Task 3, P1, P2, and P4 needed the task re-explained, so only 25% finished unassisted.

What the numbers hide: P4 rated the upload itself a 7 but Task 2 a 2.5 overall, because there was no way to save to the camera roll. P1 rated Task 3 around 5 while saying the end result “does not actually matter much.”

How much to trust this: Participants rated out loud to the team and saw only one design. Testing a single design inflates ratings and reduces criticism compared with showing several (Tohidi et al., CHI 2006, building on Wiklund, Thurrott and Dumas, 1992), so we weigh what people said over the scores.

DISCUSSION

RETHINKING OUR IDEA

People wanted to see the place itself ->

Going somewhere new felt like too much work ->

Making mattered more than the finished piece ->

RETHINKING OUR IDEA

People wanted to see the place itself. ->

Going somewhere new felt like too much work. ->

Making mattered more than the finished piece. ->

This made us ask:

Could we bring some of that environment to people while they're already making?

RETHINKING OUR IDEA

People wanted to see the place itself	->	**The environment is the inspiration**
Going somewhere new felt like too much work	->	**Bring the environment to the person**
Making mattered more than the finished piece	->	**Center the act of making**

What Made Us Rethink Our Idea

People wanted to see the place itself.
P4 wanted to picture being there, not just see artwork someone had made there

->

The environment is the inspiration
P4 wanted to understand the environment and access inspiration without traveling elsewhere.
→ Explore bringing the surroundings into the user's creative space.

Going somewhere new felt like too much work.
P4 wanted to browse more freely. Going somewhere else wasn't helpful when they wanted inspiration right then

->

Bring the environment to the person
P4 wanted to browse multiple images without repeated clicks.
→ Offer quick environment previews and fewer steps before starting.

Making mattered more than the finished piece.
P1 questioned why they would share, and P1 and P2 chose to save privately

->

Center the act of making
P1 questioned sharing; P1 and P2 chose private saving. Reflection preferences also varied.
→ Make the experience useful without requiring an upload, a recording, or public sharing.

What We Want to Try Next

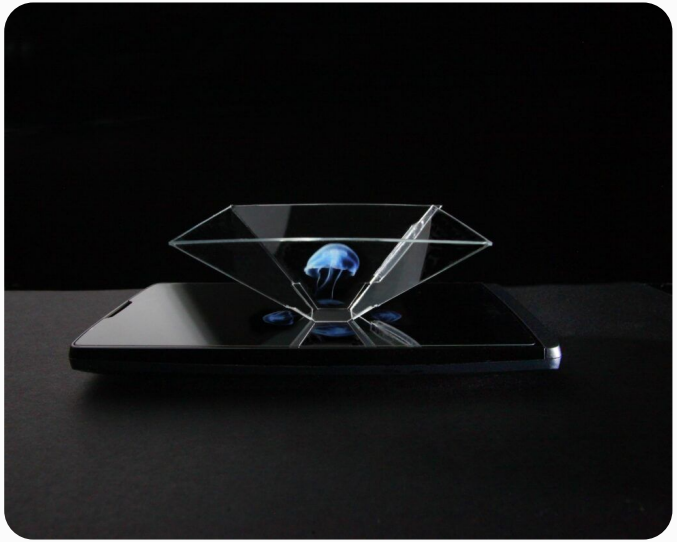

Think about sketching in a park or looking out the window on a train. Your surroundings keep changing, and you can look up whenever something catches your attention

TRY NEXT

We want to bring that feeling to someone's workspace

Hologram video + spatial sound → to create immersive observation for creation

IDEA

An ambient window into another place

Inspired by painting in a museum, sketching in a park, and watching scenery pass from a train.

- A phone-and-plastic display creates a floating-image effect
- A one-way environmental view provides changing scenery
- Optional spatial audio adds a sense of place
- Simple controls let the user choose a scene, adjust it, and return to making

Our hypothesis: changing surroundings can support creative exploration without demanding sustained attention

UNKNOWNS

Our tests showed where people got confused and what they wanted more control over. They didn't show whether our idea actually helped someone with their craft.

We also changed how we explained Task 3, so those results are harder to compare.

Next, we'll try the ambient prototype while people are actually making something. We'll look for when they pause, what draws their attention, and whether they find the scene enjoyable or distracting.

We still need to find out:

- Does the floating display add anything over a regular phone screen?
- Does live footage feel different from recorded footage?
- Would people keep using it after the novelty wears off?

STILL NEED TO TEST

What we could not establish: whether the experience supports someone's minecraft. Task 3 instructions were reframed, and the paper prototype did not simulate actual making

Next: test an ambient prototype while participants do a familiar craft

Compare making with and without the scene. Observe interruptions and ask about enjoyment, distraction, and sense of presence.

Then test separately: whether the floating display adds value, and whether live footage differs from recorded footage.

APPENDIX

ALL WATCH PROS AND CONS

Pros

Haptic turn-by-turn directions let people find a spot without staring at a screen *(A2 ethics)*

A glance at the wrist fits a short break better than unlocking a phone

Without a camera, there's less pull toward a polished final photo *(A2: meaning is in the process)*

Following a compass to an unknown spot makes discovery feel like an adventure *(A2 experience prototype 1)*

Wrist notifications get noticed while walking, even with the phone put away

Hands stay free while painting

Cons

No camera, so saving art means switching to the phone anyway

Small screen makes others' art hard to see, and small targets are slower to hit *(Fitts's law)*

Too little room to browse past work or record and review reflections *(needfinding, Lola)*

Splitting one break across two devices adds handoffs and steps *(gulf of execution)*

Fewer people own a smartwatch, which limits who can use etch *(accessibility)*

Haptic patterns have to be memorized *(recognition over recall)*

The supplies live on the phone case, so the phone comes out regardless

ALL PHONE PROS AND CONS

Pros

The phone case holds the paints and brush, so the phone is already in hand when someone starts *(A2, supplies close at hand)*

The camera is built in, so capturing and saving art happen on one device

Room for both a map and a gallery, giving more than one way to explore

The whole loop fits on one device: discover, create and save, then reflect

Big enough to look closely at others' art, and seeing others create gives permission to take a break *(A2 takeaway)*

Most people already own one, so no extra hardware is needed *(accessibility)*

Voice and text reflections capture how a session felt, along with the piece

Lock screen notifications reach people as they pass a spot

Cons

Following a map while walking competes with noticing the surroundings and can be unsafe *(A2 ethics)*

A camera-first flow can put the focus on a polished final photo *(A2: meaning is in the process)*

Less novel than a wearable

Opening the phone makes it easy to drift into other apps

More screen time works against the feeling of taking a break

A public gallery invites comparing your piece to others' *(value proposition)*

SCRIPT

Introduction and brief demo

Thanks for helping us test Etch! Etch supports low-stress creative breaks outdoors and helps you carry inspiration back to your main craft. We're testing a low-fi design so there are no right or wrong reactions, and honest feedback will help us improve.

This is a paper prototype. You can tap buttons and features will be simulated with moving paper screens. As you use it, please think aloud by telling us what you're looking at, what you expect, and anything that feels confusing or enjoyable.

SCRIPT

Task 1 – Discover inspiration

Imagine you have a short break and want to spend some time outside. You'd like to find somewhere nearby where other people have made art.

Use Etch to **find a spot you'd consider visiting to create artwork**. Tell us when you feel finished.

After completion metrics:

1. *How satisfied were you with that experience, from 1 to 7, where 1 is very dissatisfied and 7 is very satisfied? What contributed to your rating?*
2. *On a scale of 1 to 7, where one is not at all and 7 is completely, how well did Etch let you complete this task in the way you preferred? What contributed to your rating?*

SCRIPT

Task 2 – Create and save

Imagine you've arrived at an outdoor spot and created an artwork inspired by the location. Now you want to share what you make with others, use the app to do this

After completion metrics:

1. *How satisfied were you with that experience, from 1 to 7, where 1 is very dissatisfied and 7 is very satisfied? What contributed to your rating?*
2. *On a scale of 1 to 7, where one is not at all and 7 is completely, how well did Etch let you complete this task in the way you preferred? What contributed to your rating?*

SCRIPT

Task 3 – Connect inspiration to your main craft

What is a creative craft or practice you enjoy?

Imagine you're starting a new project in that craft. You've made several small pieces during past creative breaks, and you want to see whether anything in them could inspire this project.

Use app to revisit your past work and reflect on how it can connect to your craft and how you might use it. Tell us when you feel finished.

After completion metrics:

1. *How satisfied were you with that experience, from 1 to 7, where 1 is very dissatisfied and 7 is very satisfied? What contributed to your rating?*
2. *On a scale of 1 to 7, where one is not at all and 7 is completely, how well did Etch let you complete this task in the way you preferred? What contributed to your rating?*

SCRIPT

Observer notes

For each task, record:

- Whether the participant finishes independently or needs assistance
    - Number of times they need assistance and where/when
- The path they choose, any switching between approaches, and alternatives they look for
- Positive incidents, clear expectations, successful discoveries, delight, or relief
- Negative incidents, mistakes, backtracking, confusion, frustration, or unexpected behavior
- Exact quotes and the screen or action associated with each incident
- Satisfaction rating and the participant's explanation
- Flexibility rating and the participant's explanation

TASK 1

HOW WE MEASURED MISCLICKS

We measured misclicks as instances when a participant selected an option that led to an unintended outcome, or became confused and backtracked after entering a path they did not mean or want to follow.

We did not count intentional departures from our expected task flow when the app supported the participant's intention.

TASK 1 RATING BREAKDOWN

Participant	Satisfaction / 7	Flexibility / 7	Misclicks	Time
P1	4	5	1	3:22
P2	5	5	0	1:57
P3	6	4.5	0	2:27
P4	3.5	4	1	6:16
Average	**4.6**	**4.6**	**0.5**	**3:31**

P1 TASK 1 EXPERIENCE

Incident	Severity
Recognized the local map and chose the closest place	0
Praised the small number of taps and absence of extra screens	0
The experience required effort before its value became clear	2
Would probably dismiss notifications; questioned their usefulness	2
Didn't know you could tap on other people's art to see more. Accidentally tapped on it	3

Time spent: 3:22 [1:15–4:37]
Number of misclicks: 1
Rating Satisfaction: 4 / 7
Rating Flexibility: 5 / 7

"It's taking some cognitive effort. It's not rewarded in some very obvious way. It's not aggravating me... It's not showing me an extraneous amount of screens" [5:02]

P2 TASK 1 EXPERIENCE

Incident	Severity
Asked whether the map showed artwork made nearby (shows that not very clear)	2
Did not understand the artwork-detail screen	2
Expected artwork to open; initially read Directions as “directory”	1
Controls felt natural and the experience straightforward	0

Time spent: 1:57 [2:08–4:05]
Number of misclicks: 0
Rating Satisfaction: 5 / 7
Rating Flexibility: 5 / 7

“It seems pretty straightforward”; buttons “seemed natural.”[04:36–04:51

“I don’t know what this is” [referring to the wave artwork in the detail page, not aware it’s someone else's art] [2:57]

P3 TASK 1 EXPERIENCE

Incident	Severity
Did not realize changing pictures meant browsing different artworks	3
Could not tell how artwork related to the actual surroundings	3
Read Directions as “directory” → so accidentally found the directions page	1
Found the interface easy to navigate after explanation	0

Time spent: 2:27 [0:46–3:13] (they got to map pretty fast but then kept going and explored that app)
Number of misclicks: 0
Rating Satisfaction: 6
Rating Flexibility: 4.5

“The interface is pretty easy to navigate.” [04:43]

P4 TASK 1 EXPERIENCE

Incident	Severity
Read map counts as people currently drawing	2
Asked whether microphone recordings were private personal notes	3
Wanted to compare locations and see shade or table availability	3
Liked seeing artwork others made at the same location	0

Time spent: 6:16 [0:41–6:57]
Number of misclicks: 1 (felt like he messed up by going to gallery view and not the take me somewhere)
Rating Satisfaction: 3.5
Rating Flexibility: 4

“I would have liked to have seen a list… and compared multiple… options.”
[07:40–07:55]

“Where is this going? [the recording on the detailed artwork page]”

TASK 2

TASK 2 RATING BREAKDOWN

Participant	Satisfaction / 7	Flexibility / 7	Misclicks	Time
P1	4	1	1	2:21
P2	7	7	1	1:06
P3	6	-	2	3:28
P4	2.5	4	0	0:28
Average	**4.9**	**4.0**	**1.0**	**1:51**

P1 TASK 2 EXPERIENCE

Incident	Severity
Chose private saving rather than public sharing	0
Initial questions around “should I upload?” when given the task, but quickly figured it out	1
Submit sounded like sending to someone despite the private choice	3
Could imagine keeping a daily art habit and personal record	0
Unclear what saving in Etch offered over existing alternatives	2

Time spent: 2:21 [7:01–9:22]
Number of misclicks: 1 (did not find the reflection page for uploaded image)
Rating Satisfaction: 4 / 7
Rating Flexibility: 1 / 7

“Why do I have to share it?” [7:01]
“Am I saving this for myself or am I submitting this to someone? [referring to the “submit” button text] [8:22]
“I’m not sure what doing this in the app gave me that I would have gotten had I not done it in the app” [9:48]

P2 TASK 2 EXPERIENCE

Incident	Severity
Completed the familiar capture-and-private-save sequence	0
Immediately went to upload when given task	0
Liked the gallery presentation	0
Thought the gallery was only his drawings and not other peoples art. After explained concept, said he would want a version where it is just his art.	2
Private saving supported wanting time to think about inspiration	0

Time spent: 1:06 [6:11–7:17]
Number of misclicks: 1 (did not find the reflection page for uploaded image)
Rating Satisfaction: 7
Rating Flexibility: 7

“Seemed really easy to do. Pretty straightforward, stuff I’ve done before” [8:20]

P3 TASK 2 EXPERIENCE

Incident / reflection	Severity
Could not find audio creation after uploading an image; hard to know you could click main artwork in the gallery	3
Asked whether X was the cancel control	2
Valued the option to keep journal entries private	0
Could not add a reflection from the “Reflection” page in mine section	3

Time spent: [7:14–10:42]
Number of misclicks: 2 (not able to make a reflection; wanted to make new reflection from “mine” page)
Rating Satisfaction: 6
Rating Flexibility: Not recorded

“I want to upload an audio pertaining to the image I uploaded” [9:05]
“I don’t really see the option to do that [to record a reflection after sharing an artwork]” [08:53]

P4 TASK 2 EXPERIENCE

Incident	Severity
Completed the anonymous public-upload flow independently	0
Could not save to the camera roll; proposed screenshotting and cropping	3
Liked seeing the artwork displayed and shared	0
Rated upload mechanics highly, despite unmet personal-saving needs	0

Time spent: 0:28 [10:19–10:47]
Number of misclicks: 0 (reached the artwork detail page; did not try to record anything)
Rating Satisfaction: 2.5
Rating Flexibility: 4

“The not being able to save it for myself [on his camera roll]… really bugged me.”
[12:39–12:44]

TASK 3

TASK 3 RATING BREAKDOWN

Participant	Satisfaction / 7	Flexibility / 7	Misclicks	Time
P1	5	4	0	2:49
P2	5	5	0	3:45
P3	6.5	6	1	3:53
P4	4.5	1.5	0	6:00
Average	**5.3**	**4.1**	**0.25**	**4:07**

P1 TASK 3 EXPERIENCE

Incident	Severity
Valued having a gallery or record of things made	0
Wanted clearer purpose and context for making and keeping artwork, the app didn't provide that motivation	3
Imagined seeing older work differently beside a newer piece	0
Said the interface felt familiar and nothing was very frustrating	0

Time spent: 2:49 [13:39–16:28]
Number of misclicks: 0
Rating Satisfaction: 5
Rating Flexibility: 4

"There is a value in the process that I'm getting as a person that I'm not getting in the product [of the art he creates]" [14:33]

P2 TASK 3 EXPERIENCE

Incident	Severity
Could not find how to create a new reflection from an artwork	3
Appreciated access to both audio and a readable transcript	0
Wanted video capture to support music as a creative practice	2
The gallery helped the piece feel more like an artwork	0

Time spent: 3:45 [8:55–12:40]
Number of misclicks: 0
Rating Satisfaction: 5
Rating Flexibility: 5

“If I’m in a place that I can’t listen to it [the recording], I can just read it [referring to the reflection transcripts].” [10:24–10:30]

P3 TASK 3 EXPERIENCE

Incident	Severity
Could not find a clear route back from the gallery to directions	3
Wanted surroundings previews and information about local activity	2
Enjoyed spontaneous exploration and nature as inspiration	0
Requested a short introduction to explain the artwork's purpose	3

Time spent: 3:53 [12:20–16:13]
Number of misclicks: 1 (didn't have a back option from gallery directions to map)
Rating Satisfaction: 6.5
Rating Flexibility: 6

"I would go to explore, and then I would go to "take me somewhere...I get inspo not from algorithms but from spontentity" [13:00]

"Want to see the end destination like 360 view" [15:00]

P4 TASK 3 EXPERIENCE

Incident	Severity
Disliked the idea of hearing their own voice in reflection playback	2
Wanted many images to scan instead of repeated clicks to reach one	3
Walking elsewhere did not meet the immediate inspiration need	3
Eventually found attractive art that “maybe” inspired them	0

Time spent: 6:00 [14:43–20:43]
Number of misclicks: 0 (but did not find seeing his artwork or reflections inspired him)
Rating Satisfaction: 4.5
Rating Flexibility: 1.5

“Then I’d realize seeing my art doesn’t inspire me that much so I would go back to the explore button” [18:30]

“There’s way too much click, click [when wanting to look at multiple images to get inspiration]” [23:06]

“Either that pictured unblocked me or I’m going to have to find another app” [19:00]
